DETAILED ACTION

Allowable Subject Matter

Claims **13-19** are allowed.

The following is an examiner's statement of reasons for allowance: Claim 13 is allowable over the prior art because the prior art does not teach or fairly suggest a test member that comprises an adjacent working and non-working areas that together define a top surface of the test member and together define an opposite bottom surface of the test member; the working area configured to engage a fluid applied thereto and having a total thickness between an uppermost portion of the top surface of the test member in the working area and a lowermost portion of the bottom surface in the working area; the working area comprises a reagent and a plurality of electrodes; the non-working area having a total thickness between an upper most portion of the top surface of the test member in the non-working area and a lowermost portion of the bottom surface of the test member; the non-working area comprising a plurality of electrode tracks and a dielectric layer, the plurality of electrode tracks being electrically connected to the electrodes of the working area of the test member; the total thickness of the non-working area being greater than the total thickness of the working area such that when the test member is sandwiched in a vertical stack of identical test members the working area of the test member will not engage an identical test member positioned immediately there above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
